

Earth: 250 Million Years Ago

Hey kids, this is
the world you live
in right now!
Pretty cool, huh?

Catch the Drift!

Before our planet had seven continents, all the land on Earth was connected and animals wandered from one part of the landmass to another. When the land drifted apart, the animals were separated. Scientists have found fossils of the same animals on different continents, proving that the continents were once a lot closer together than they are now.

Want to see the continental drift in action?

Check out *Ice Age: Continental Drift* in theaters on July 13, 2012! Visit www.iceagemovie.com for trailers and other information.
